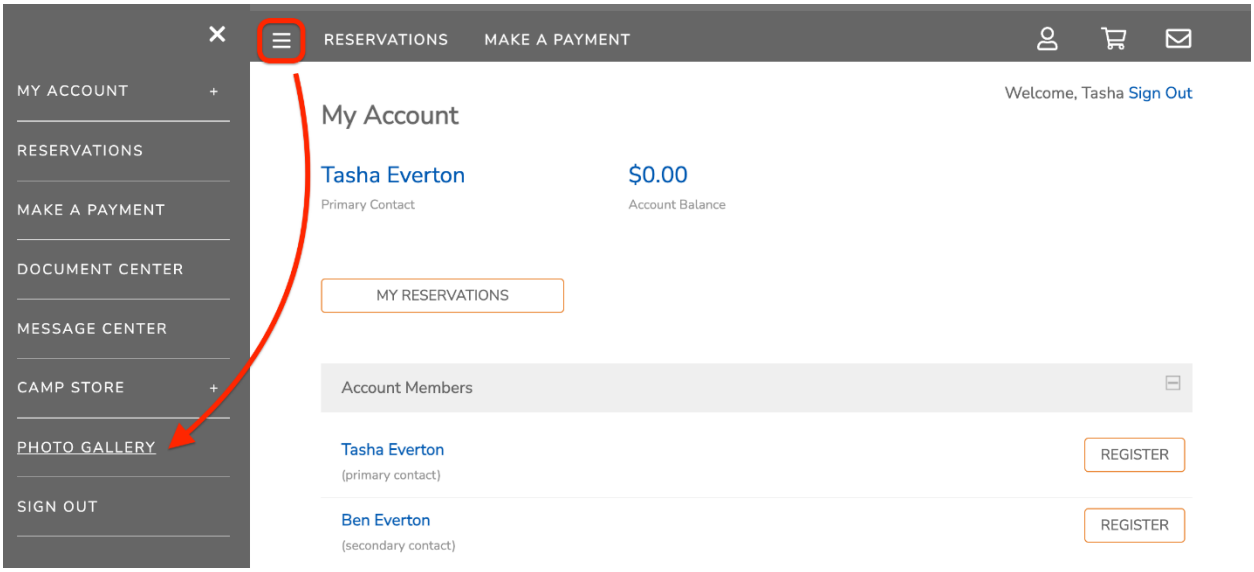
HOW TO USE SMUGMUG

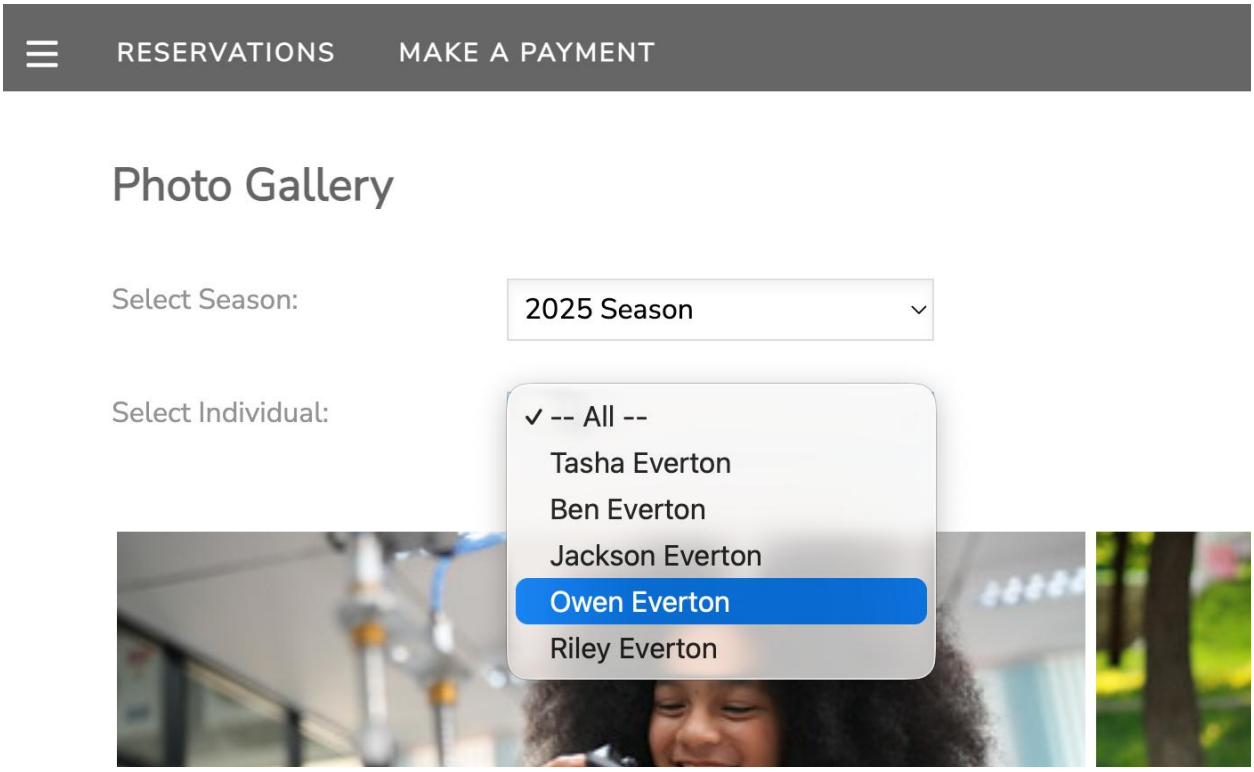
To use facial recognition, the child must be registered for a session and the camp must have posted photos to the gallery. Families should use an updated profile photo of their child for best results.

Steps for families:

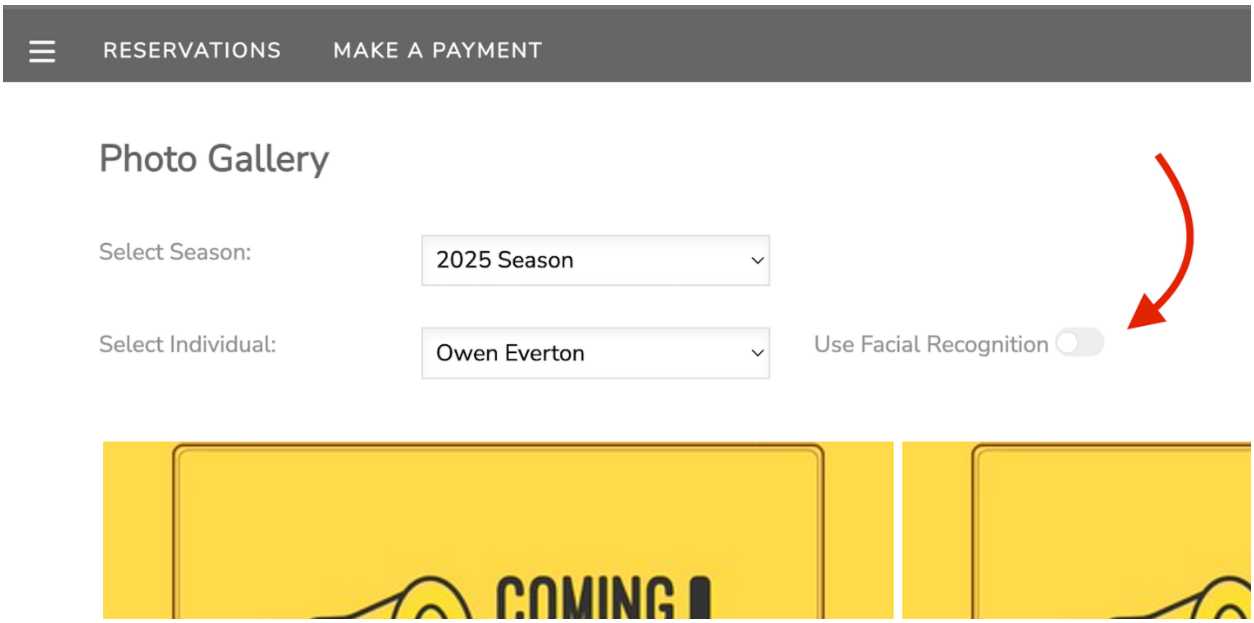
1. Log into **public** account, click on the **menu icon** and select **Photo Gallery.**



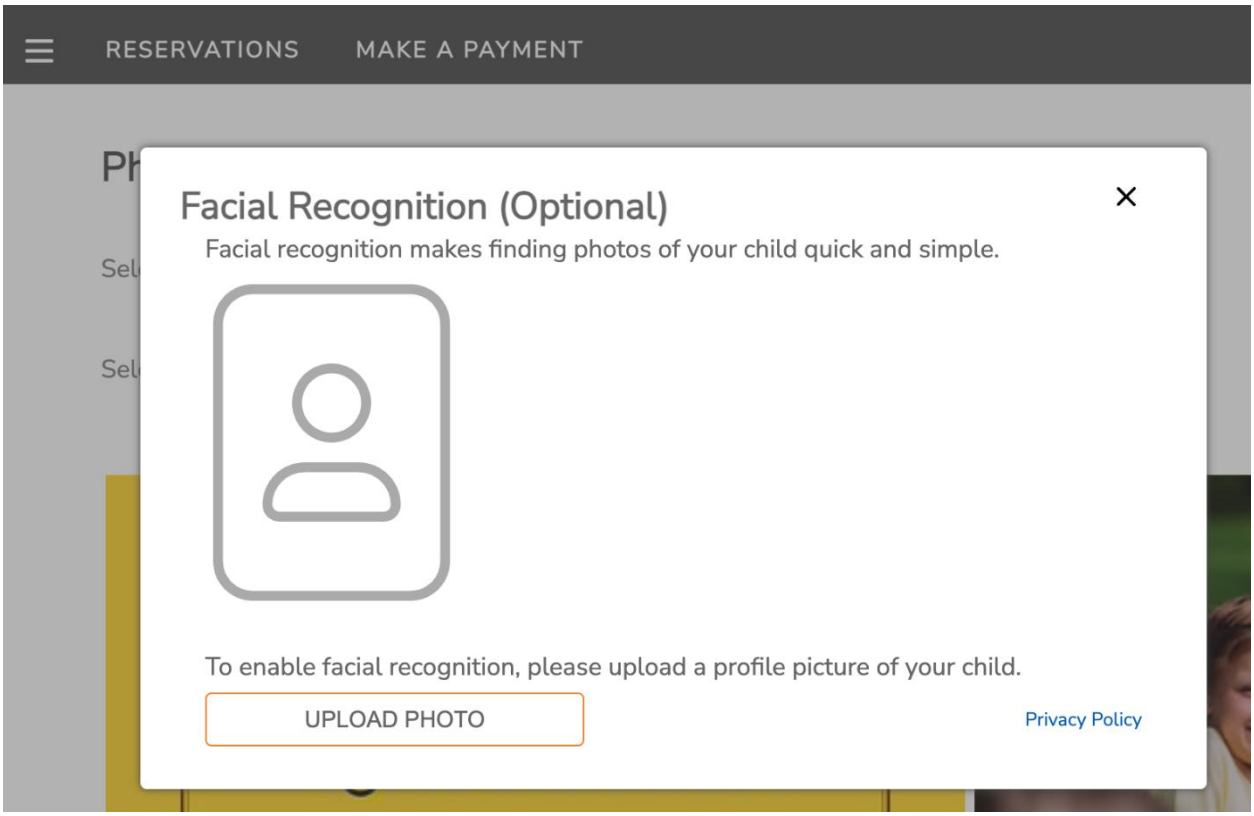
2. Select the season, then the child from the **Select Individual** dropdown.



3. Toggle the **Use Facial Recognition** button to On.



4. Facial recognition uses the profile photo saved in the account to identify and display photos of that camper.
   If no profile photo exists, the family member will be prompted to upload one.



5. The system remembers each family member's preference for each child. When they log out and log back in, their preference for facial recognition is saved.
